- *Vehicle height data is based on the vehicle model, listed at the top of the model column
- *Data are measured based on representative vehicle models. Please note that slight differences may depend on the vehicle model, so please use this as a guide only.
- *In rare cases, the vehicle's minimum ground clearance may differ from our measurements. Please confirm in advance.
- *The vehicle height adjustment width is within the calculated range, and we do not confirm the installation. Please comply with safety standards and adjust the vehicle height appropriately.
- *For vehicles produced after January 2006, the height to the lower edge of the fog lamp must be less than 250 mm and the height to the lower edge of the turn signal is less than 350 mm when lowered.
- *If the height of headlights (headlights/low beams) is less than 500mm, it will violate the safety standards and will not comply with vehicle inspection, so please check the height of the current vehicle. Please put it on.
- *When the product is installed, the radar, camera, sensor, etc. recognition range may differ from the standard vehicle height, which may cause malfunctions.
- *We cannot be held responsible for any damage caused by malfunctions of safety devices, collision avoidance support devices, driving support devices provided by automobile manufacturers, or accidents caused by such malfunctions.
- *Product materials, specifications, down amount, and price are subject to change without notice
- *Even with minor vehicle changes (same model), some vehicles may have lowered specifications as standard
- In that case, please note that the amount of down may differ from the description.
- *Due to individual vehicle differences, if the rear inner fender and spring interfere, cutting is required.
- *Some models require genuine parts to be reused for installation. Please be careful when installing from other than genuine suspension.
- *The vehicle height adjustable range is the range that can be adjusted based on calculations. Actual use may be difficult due to factors such as vehicle height, road surface conditions, tire size, etc. Please comply with safety standards and adjust the vehicle height to an appropriate level.
- * Regarding the display of MODEL COMFORT spring rate
Since it utilizes two springs, the spring rate constantly changes while driving due to changes in load (deflection). therefore, the spring rates listed are within the range of change.
